Serving Solutions In Risk

The firm can offer a diverse and unique array of predictive risk solutions for a vast number of industrial segments designed to hedge planetary-related risk. These highly diversified products are tailored towards

the following sectors: agribusiness, chemicals, commodities, construction, energy, events, finance, forensics, health, insurance, investments, manufacturing, retail, telecommunications, tourism, transport & travel.

In addition to risk

reduction, its customized disaster monitoring and GMSA — Global Modeling Sensitivity Analysis — can be used to gain a distinct advantage when hazards & perils exist in increasingly competitive markets. Our divisions — the GDU (Global Disaster Unit), **T.O.R.A.A.M.A.E.**[®] (Trans-Oceanic Research Alliance in Advanced Meteorological Applications for the Environment), **G.A.P.E.C.S.**[™] (Global Assessment & Prediction of Earth Climatic Shifts), and its philanthropic group, Weather For Humanity[™] — which assists with climate refugees — are all synergistically aligned to better the financial, logistical and security interests associated with both natural and human-caused disaster-prone areas and diverse situations from tomorrow through 2018.

Tailored, Precise Services

Tailored services with customized know-how, insights and assessments to companies and groups ranging from individual ownership to global corporations with assets in excess of \$50 billion, as well as investors and individuals that are affected by any natural-based threats, human-caused perils and irregular economic complexities are as follows.

- **AFCG.E.R.T.T.A.**[®] (Global Environmental Risk Threat & Terror Analysis): human-caused hazards.
- **AFCForecastS.M.A.R.T.**[®] (Seasonal Management and Advanced Risk Tools): a superior forecasting product with excellent service at a favorable investment, containing the greatest level of customization and product detail, and producing one of the highest levels of forecast accuracy, confidence & reliability in planetary risk science.
- **AFCWeatherTalk**[®]: a unique blend of weather risk consulting, interactive seminars, forecast workshops & keynotes, centered on strategic weather profiling – yielding a competitive advantage & assisting in managing your risk portfolio and integrating corporate processes to maximize performance. Programs offer clients uniquely-designed sessions with specific answers and results from clearly-defined goals.
AFC Consulting Group, LLC: a wholly-owned subsidiary with expertise in developing precise, tailor-built, parameter-driven modeling for any industry affected by planetary changes/adversity.
- **AFCWeatherHedge**[®]: a comprehensive line of risk management products, as well as value-added resources such as hedging and trading strategies, e-commentaries, investment analysis and portfolio optimization related to the atmospheric sciences and planetary risks.

Meteorological Intelligence®

One part of Advanced Forecasting Corporation [AFC] specializes in Meteorological Intelligence®, a revolutionary set of powerful discoveries, advanced concepts, specialized applications and innovative endeavors in global weather risk management. The Corporation's high-precision, accurate and reliable solutions as well as its local to international forecasting products enhance individual to corporate to national economic profits, enrich business continuity, decrease weather-related capital expenditures through disaster planning, add opportunistic revenue streams, lessen damage to equipment & infrastructure, help restrict environmental ruin & reduce human suffering & loss.

Since the firm's inception in 1993 in Scandinavia, AFC continues to expand worldwide in an exciting direction by moving forward with confidence into a new era of meteorological technology. By developing powerful proprietary insights and adding new dimensions in reducing weather-related risk the firm's ability to provide everything from ultra-resolution, minute-to-minute monitoring to quantitative prognostications 10 years ahead is a dedicated challenge it is meeting with unmatched performance.

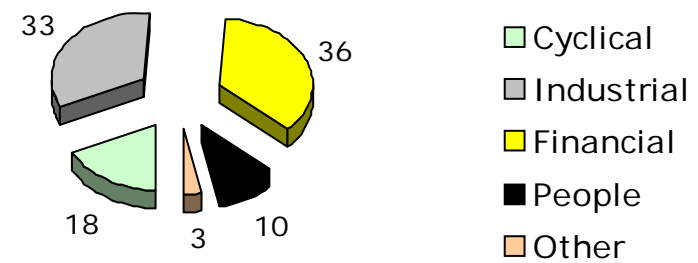

Climate & Human Modification

Mother Nature is

changing the playing field: first, through the 'natural' and likely larger parameters of significance — solar flare variations, electromagnetic flux pulses, oceanic heat exchange modifications and Jetstream variations. Human urban sprawl, biospheric degradation, deforestation & pollution discharge a part of the big equation too. All adaptations, including population displacement, are caused by modern climate change and human impacts with ensuing costs to our economies, environments & societies.

2007 AFC Market Distribution (%) In Different Types Of Industries Affected By Planetary Risk Management

Corporations and citizens worldwide are no longer accepting the huge losses due to adverse risks. As a result, planetary risk management is growing rapidly.

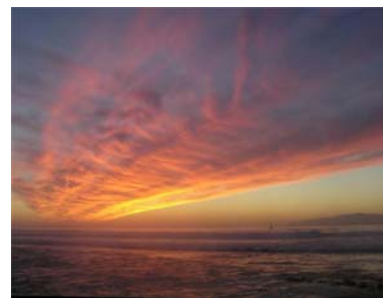

Stunning Innovative Results

*G*round-breaking research often starts with a perplexing question: if the moon's gravitational force affects Earth's tides, then is it possible that the solar wind or an electromagnetic force field could affect a chief component of atmospheric motion or even activate a series of earthquakes? And so a journey, a quest for reaching new understandings, begins. Our view may be different, but we are continually seeing astounding, breathtaking results.

Cutting-Edge Knowledge

*T*here has been a documented trend toward greater damages and losses caused by continually increasing atmospheric "shifts". Financial losses due to weather adversities amass into the billions of dollars each and every month. AFC is increasingly gaining a superior understanding of the complex mechanisms in the atmosphere and their relationship with the oceans, the sun and natural energy grids. The firm's atmospheric scientists, modelers and information technology specialists maintain an excellent track record in predicting atmospheric irregularity more accurately and within longer windows of time. AFC's superior technology includes neural network toolboxes, artificial intelligence, genetic algorithms, innovative programming, numerical simulation techniques, teleconnections and mathematical mapping to advance weather forecast skill, bringing stunning results to a myriad of markets, industries, corporations, NGOs and investors alike.

*O*verall, AFC's mission and vision as well as its corporate pillars have been on a continual journey of innovation, freedom, and transformation — a path of incremental and continuous improvement in likeness to the corporate logo — looking from above at a butterfly with clouds & the ocean in its wings reflected by the sun — a positive mark symbolizing fertility, individuality and metamorphosis to dare new and higher levels.

Crossing New Thresholds®

New boundaries are as exhilarating as they are intimidating. One unique attribute that joins together both the dreamers and the realists at AFC: the desire to go to the next level. Some species, like the caterpillar, take the plunge, others hold back. Certainly, the rewards can potentially exceed the risks. Therefore, it makes sense to us if the personified desire or dream of a caterpillar is to be a butterfly one day, then surely it is an attainable goal to cross new boundaries in the sciences putting together the pieces of the puzzle that integrate the oceanic-atmospheric & interplanetary forces at work.

A considerable amount of research initiated in the atmospheric sciences today continues to get its roots from theories decades old that ironically have not been 're-calibrated' with modern principles & visionary ideas. For example, even though a butterfly flapping its wings in Brazil today is a minuscule cause of a tornado in Texas tomorrow — as per the 'Butterfly Effect', a part of the Chaos Theory — this same theory limits science to better understand how to predict long-range weather more accurately. To the contrary, AFC steps out of the box and stresses the harmonious interconnectedness of the Earth's atmosphere with events such as solar cycles and electromagnetic fluxes. In other words, we believe we bring a more complete picture to understanding better the 'why' and 'how' questions related to energy fields that potentially formulate adverse planetary risks.

Commitment To The Highest

6 DIAMOND STATEMENTS OF AFC'S MISSION

- ◆ We take pride to provide innovative planetary risk management services with a commitment to the highest possible accuracy, reliability, quality, customization of which we strive to give the greatest possible value and usefulness to our clientele. We exist to satisfy and exceed both present and future clientele needs and concerns.
- ◆ We develop relationships with clientele to determine the most appropriate, effective solutions to their planetary risk related needs and concerns. We seek to build helpful, positive, long-term relationships characterized by mutual respect, courtesy, and integrity.
- ◆ We maintain competitiveness in marketplaces by contributing to and providing new prediction and monitoring resources and services. We strive to be flexible to global competition and rapid technological change.
- ◆ We continually expand our base of knowledge & skills in the sciences, forecasting, information technology and other new studies. We intend to provide a superior service at a favorable price.
- ◆ We work toward fulfilling dreams and aspirations by creating exceptional working environments of the future. We exist to be a family of individuals working as a global team.
- ◆ We aim to be an intellectual, economic, and social asset in any locale, from community to country, we establish a relationship. We aspire to instill a philanthropic and entrepreneurial presence. We love doing what we do because it helps the planet move forward in a positive way.

Lowered Risk & High R.O.I.

*T*here is almost always more than meets the eye.

Incorporating AFC's planetary risk services as an integral part of your investment portfolio allows you to know with confidence which storms, earth shifts or terror events will negatively affect your assets or interests. A lowered risk profile is certainly a comforting ace in any manager's strategic pack of cards. The return on investment is even better, so there only remains the question of when to begin.

Planetary Risk Management

*T*he field of planetary risk management means specializing in providing tailored solutions in forecasting weather volatility and the impact of global climate change, the threat of earthquakes and other natural-based planetary disasters, as well as advisory consulting surrounding the growing dangers of terrorism. AFC is a think tank leader in this exciting new field.

*A*dvanced Forecasting Corporation is dedicated to serving many risk needs, and is committed to delivering a solid return on investment in planetary intelligence. Given its extensive disaster prediction expertise, pioneering tools, and enthusiastic approach to research, AFC is able to provide cutting-edge products that enable businesses to make swifter, more accurate decisions. AFC continues to strive for distinction in its line of products and customer care with a 'kaizen' approach. Its mission's principles and corporate philosophy revolve around solution-oriented excellence, accommodating all specific requests and delivering on-time worldwide twenty-four hours a day. In essence, with each new sunrise, AFC makes a positive difference in any situation of short-term critical adversity to long-range seasonal planning. The organization exists to build helpful, positive, long-term relationships characterized by integrity and professionalism. The different teams around the world value each opportunity to serve any local to global planetary risk management need and look forward to Crossing New Thresholds® with you in 2008 and beyond...certainly before the next disaster.
